ABOUT ME

Passionate about continuous improvement, data analysis, and process optimization, with a strong focus on efficiency, innovation, and ergonomics applied to human body measurement and injury prevention. I aim to develop in a dynamic environment where I can apply my knowledge from a fresh perspective, combining analytical thinking, creativity, and a solid foundation in industrial engineering to create meaningful impact.

EDUCATION

Campoalto School, Paraguay | 2006-2020

High School Graduate

Universidad Politécnica Taiwán - Paraguay (UPTP) | 2023-2024

Industrial Engineering

National Taiwan University of Science and Technology (Exchange Student) | 2025-2026

Industrial Engineering

WORK EXPERIENCE

Stewart Entrance Course | 2023 - Present

Precalculus and Multi Subject Tutor – Preparatory Course & Private Students

Precalculus instructor at the Stewart Preparatory Course, an induction program for the UPTP entrance exam. For two consecutive years, Stewart students accounted for 50% of all university admissions, establishing it as one of the top preparatory courses in the country. Currently continuing to teach virtually. Also privately teaches mathematics, English, and Spanish to Taiwanese and Paraguayan students.

Banco Itaú Internship | July 27 - September 18, 2026

Data Analyst – Final Internship, Casa Central (Head Office), Asunción, Paraguay

Final internship at Banco Itaú, Casa Central, in Asunción, Paraguay, as part of the Data Analyst team. Learns to develop and work with database analysis tools using SQL, as well as Python, applied to generative artificial intelligence solutions implemented within the institution's application. Statistical measures are performed and data is analyzed to improve the user experience within the app, aiming to prevent or anticipate any errors that users or the bank could encounter within the database.

ACHIEVEMENTS AND ACTIVITIES

Nagoya, Japan | 2026

Accepted Paper – International Congress on Engineering and Information (ICEAI)

Research selected and presented at an international engineering conference held in Nagoya, Japan. The study analyzed a powdered milk production line in Paraguay, identifying high-risk tasks for workers and integrating collaborative robots through digital simulation. Results demonstrated a significant reduction in ergonomic risk levels and the elimination of direct worker exposure to hazardous chemical substances.

Asunción, Paraguay / Taipei, Taiwan | 2026

Capstone Research Project – Taiwan-Paraguay Polytechnic University (UPTP) & National Taiwan University of Science and Technology (NTUST)

A foam mattress factory in Paraguay presented high physical risk working conditions across multiple positions on the production line. A digital twin of the facility was developed in FlexSim to simulate the full process and evaluate ergonomic risk across nine workstations. The financial feasibility of automating the line through robots, autonomous vehicles, and conveyor belts was also assessed, modeling the return on investment over 10 years under three cost scenarios. Results identified the highest-risk workstations and confirmed the profitability of automation under both conservative and optimistic scenarios.

Here is the link for more information: <https://capstone-project-lac-iota.vercel.app/>

Wichita State University | 2025

Optimization for Engineers Online Course

Accepted into an online Optimization course offered by Wichita State University, focused on improving decision-making and process efficiency through analytical and mathematical techniques.

National University of Asunción (UNA) - Instructor: Ing. Marcelo Romero Ocariz | 2026

Completed Course – Introduction to SAP S/4HANA

Focused on enterprise resource planning (ERP) fundamentals, business process integration, and core functionalities of SAP S/4HANA within industrial and organizational environments.

National University of Asunción (UNA) | 2026

Completed Course – Introduction to SQL

Focused on database fundamentals, SQL, key commands (DDL, DQL, DML), and practical applications in data analysis.

Universidad Politécnica Taiwán - Paraguay (UPTP) | 2023 - 2024

Active Member of the UPTP Student Council

Coordinating academic and social activities, organizing institutional events, and serving as a student spokesperson to promote communication between students and the university administration.

Entrepreneurship Project | 2024

Cow Market Web Platform

Co-created Cow Market with three teammates, a web-based cattle auction platform that generated revenue through transaction commissions. Contributed to the platform's design, auction logic, and payment processing flow, providing an innovative digital solution for livestock trade.

Objects Oriented Programming and Data Structure | 2024

Software Development Projects

In Object-Oriented Programming (OOP), developed a dynamic library management system for students and staff, using C and C++. In Data Structures, built the Find Your Route Partner app to connect students with private transportation, reducing travel time and costs, using Python.

Technical Drawing Course | 2023

Sustainable Design Project

Third place in a university competition for designing an eco-friendly mosquito net using renewable materials, developed in collaboration with Electromechanical Engineering students.

Honor Roll | Colegio Campoalto | 2020

Academic Recognition

Recognized as part of the honor roll for maintaining high academic performance, demonstrating discipline, responsibility, and excellence throughout my school years.

Casa Albino Luis and San Rafael Church | 2016-2017

Volunteer

Assisting in community service activities, organizing donation drives, and supporting social outreach programs for families in need.

Techo Paraguay | 2019-2024

Volunteer

Volunteer at TECHO Paraguay, participating in community development projects, assisting in the construction of emergency housing, and supporting social initiatives to improve living conditions in vulnerable communities.

South American Games ODESUR | 2022

Volunteer

Assisting in event coordination, athlete support, and logistics management to ensure the successful development of the competitions.

SKILLS

- Soft Skills: Leadership, Proactivity, Patience and Resilience, Result-Oriented Mindset, Teamwork, Effective Communication, Problem Solving, Time Management, Adaptability
 - Technical Skills:
 - Simulation & Modeling Software: Flexsim
 - Programming & Data Analysis: Python(Pandas, NumPy, Matplotlib, Seaborn), C, C++, Java, HTML, CSS, SQL, MATLAB, AMPL
 - Financial & Analytical Tools: Advanced Google Sheets, Excel, Power BI, Tableau
 - Project & Process Management: Lean Six Sigma basics, Process Mapping, KPI Tracking, Workflow Optimization
-

LANGUAGES

- Spanish (native language from Paraguay)
- Guarani (native language from Paraguay)
- English (Advanced)
- Chinese (basic)
